

Features

The armchairs are specially design to be used in hospitals, clinics, nursing homes and also in home care.

Their easy to use makes it robust and resistant for extensive uses.

The armchair is made of a tubular steel structure with polyester coating, with upholstered seat, backrest and footrest sections with multiple colour options.

The armchair is articulated in two sections by levers located in both sides, driven by gas spring to raise and low the backrest and footrest.

It also has foldable armrest to allow side access.

Depending on the intended user several configurations are available based on the quantity of wheels it has or the accessories can be placed in it.

Options:

For patient use, it can integrate 2 or 4 wheels, pushing and carrying handle, table, tank holder, IV pole and footrest.

For companion use, no wheels or other element will be necessary.
